

# Building Bucky

a generic, chatbot-based microwork platform.

# Presentation outline

1. Introduction
2. Running example
3. Design
4. Demo
5. Evaluation
6. Future work
7. Conclusion

# Introduction

# What is microwork?

“**Microwork** is a series of small tasks which together comprise a large unified project, and are completed by many people over the Internet.”

- Wikipedia

# The current state of microwork

## Best practices

Simple tasks

Verifiable tasks

Pre-testing users

Show progress

## Challenges

Collaborative tasks

Recruit/retain users

Task complexity

Evaluation

## Sources:

[1] Crowdsourcing User Studies With Mechanical Turk

[2] Crowdsourcing systems on the world-wide web

# A chatbot can add value

- Smartphone can be used at any place and time
- Does not require a special app
- Great natural interface for interaction

- Requires programming knowledge and effort to get running for a specific organization

A microwork chatbot platform is missing

# Requirements

## Prototype

- Flexible and generic
- Efficient
- Quality control

## Final product

- Natural language processing
- Task matching
- Contextual information
- Gamification

Running example

Running example: Delft municipality

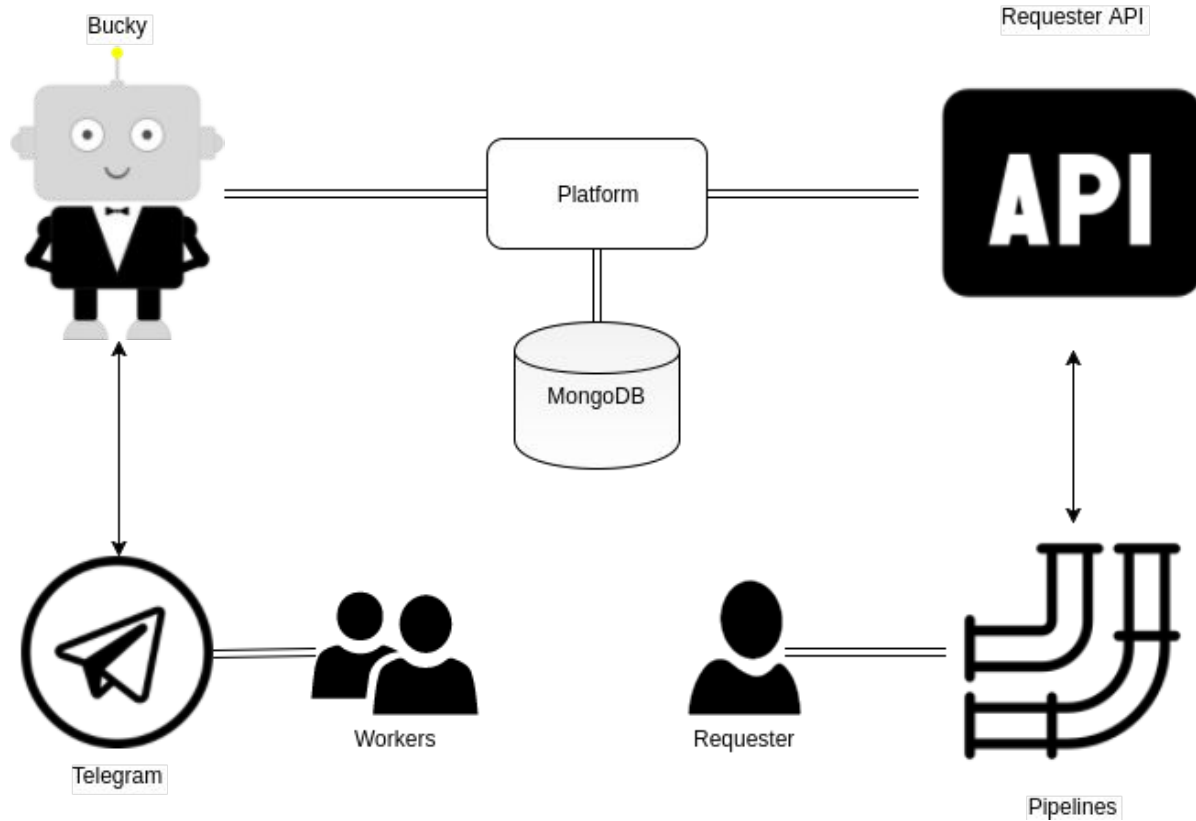

Municipalities and citizens both benefit from  
better public services.

# System overview

# Twitter pipeline

- Fetches tweets with #Delft from Twitter
- Pre-processing to remove tweets with swear words
- Post-processing to create CSV file with aggregated results

# Demo

not

BU

I therefore you are needed to judge them.  
Examples of appropriate tweets are:

- Micro-appartementen, voor starter die geen huis kan vinden  
<http://www.hetnieuws.in/nieuws/4307018/amsterdam/aste-n/delft/den-haag/nederland/opende/rotterdam/utrecht...>  
#delft

- Oude station van #Delft krijgt #herbestemming en moet weer de spil worden in de stad.  
<https://www.linkedin.com/groups/1863584/1863584-6253841007671158737>

Now it is your turn. Would these tweets be interesting for the official Delft Twitter account to retweet?

@auntmingtravel tweeted: Beautiful potteries for sale at the Delft weekend market!!!  
#Delft  
#Tourisme <https://t.co/R251y3ExzO>

Should the official Delft twitter account retweet this tweet?

# Recap

- Use pipelines to create tasks and fill them with content.
- Easy and quick to do tasks, even when you have a short amount of time.
- Specific answers in buttons to reduce effort even more.
- Review tasks from other people to assure quality of answers.

# Evaluation

# Evaluation

Goal

Setup

Experiment execution

Test User

# Results

## Performance

	Chatbot (sec)	Crowdfunder (sec)
From start until task	20.43	33.36
Per task	15.11	11.36

# Evaluation Conclusion

Without experience

	Chatbot (sec)	Crowdfower (sec)
From start until task	20.43	33.36
Per task	15.11	11.36

With practise

	Chatbot (sec)	Crowdfower (sec)
From start until task	13.51	30.89
Per task	7.70	9.03

Future work

# Prototype

- ✓ Flexible and generic
- ✓ Efficient
- ✓ Quality control

# Final product

- ✓ Flexible and generic
- ✓ Efficient
- ✓ Quality control
- ✗ Natural Language Processing
- ✗ Task matching
- ✗ Contextual information
- ✗ Gamification

# Conclusion

# Conclusion

Microtasks & why a chatbot

Running example: Municipality of Delft
